

FOREMAN[®] Benches

The FOREMAN[®] bench catalog features a wide range of designs to meet the need of any application. Our lineup includes the FOREMAN[®] Signature model, the Integrated Bench, the Traditional Stainless Steel Posts Bench, and the Framed Bench.

FOREMAN[®] Signature Benches

The FOREMAN[®] Signature Series bench features a seat made from 3/8" thick solid phenolic material, while all other components are crafted from 1/2" thick phenolic for added durability and stability. This bench boasts both an oversized museum style model as well as a utility model with integrated clothes hooks and shoe rack for added usability. Optional colors from Wilsonart[®] and upholstered seats by Naugahyde[®] come in various designs and colors, offering further customization.

Locker Integrated Benches

Our Integrated Benches complement our two most popular locker designs: the Signature Locker Series is crafted from 3/8" solid phenolic with 5/8" supporting corbels, and the Traditional Locker Series where the bench is incorporated into the locker design to create an open cubby bench. The integrated benches are designed to offer durability and a seamless fit.

Stainless Steel Posts Benches

Our Traditional Stainless Steel Post Benches, available in both standard and ADA-compliant designs, feature 5/8" thick solid phenolic seats and 1/8" thick stainless steel posts. Designed to be anchored to the floor with concealed hardware, these benches are offered in lengths from 16" to 96". Benches between 3' and 6' have 2 stainless steel posts, while the 7' and 8' models have 3 posts.

The ADA models include a design without back support utilizing 3 posts and a design with back support utilizing 4 posts alongside stainless steel brackets for added support, making it adaptable for wall installations or high-occupancy areas.
